

### Q1. How can we create an iterator object from a list?

- a) **Bypassing the given list to the iter() function**
- b) By using a for a loop.
- c) By using a while loop.
- d) You cannot create an iterable object

### Q2. If the function contains at least of one “yield” statement, then it becomes \_\_\_\_\_

Choose one

- a) An iterable
- b) **a generator function**
- c) an anonymous function
- d) None of the above

### Q3. What is the output of the code?

```
1. mylist = [1, 3, 6, 10]
2. a = (x**2 for x in mylist)
3. print(next(a), next(a))
```

- a) 1 3
- b) **1 9**
- c) 1936100
- d) 1

### Q4. What are the criteria that must be met to create closure in Python?

- a) **The program Must have the function inside the function.**
- b) The nested function must refer to the value defined in the enclosing function.
- c) The enclosing function must return the nested

d) All of the above.

Q5. What is the output of the code?

```
1. def Foo(n):  
2.     def multiplier(x):  
3.         return x * n  
4.     return multiplier
```

5.

```
6. a = Foo(5)  
7. b = Foo(5)
```

8.

```
9. print(a(b(2)))  
a) 25.
```

b) 100

c) 10

**d) 50**

Q6. What is the output of the code?

```
1. def make_pretty(func):  
2.     def inner():  
3.         print("I got decorated")  
4.         func()  
5.     return inner
```

6.

```
7. def ordinary():  
8.     print("I am ordinary")
```

9.

```
10. pretty = make_pretty(ordinary)  
11. pretty()
```

a) I got decorated

b) I am pretty

c) **I got decorated I  
am ordinary**

d) am ordinary I got  
decorated

Q7: What is the more pythonic way to use getters and setters?

- a) Decorators
- b) Generators.
- c) Iterators
- d) **@property**

Q8. In Python, there is a built-in function `property()` that returns a property object. The property object has which of the methods?

- a) `getter()` and `setter()`
- b) **`getter()`, `setter()` and `delete()`**
- c) `getter()` and `delete()`
- d) `setter()` and `delete()`

Q9. Which of the following statement is true?

- a) You cannot chain multiple decorators in Python.
- b) Decorators don't work with functions that take parameters.
- c) The `@` symbol doesn't have any use while using decorators.
- d) None of the above

Q10. For the following codes, which of the following statements is true?

```
1. def printHello():
2.     print("Hello")
3. a = printHello()
```

- a) Print Hello() is a function, and a is a variable. None of them are objects.
- b) Both printHello() and the reference to the same object.
- c) **Print Hello() and the reference to different objects.**
- d) Syntax error! You cannot assign function

Q11. What is the output of the program?

```
1. def outerFunction():
2.     global a
3.     a = 20
4.     def innerFunction():
5.         global a
6.         a = 30
7.         print('a =', a)
8.     a = 10
9. outerFunction()
10. print('a =', a)
```

a) a = 10 a = 30  
b) a = 10  
c) a = 2  
d) a = 30

Q12. Which of the following statements is true?

- a) A class is a blueprint for the object.
- b) You can only make the single object from the given class
- c) Both statements are true.
- d) Neither statement is true.

Q13. What is the output of the code?

```
1. class Foo:
2.     def printLine(self, line='Python'):
3.         print(line)
4.
5. o1 = Foo()
6. o1.printLine('Java')
```

- a) Python
- b) Line
- c) Java

- d) Java  
Python

Q14. What is the function of the `__init__()` function in Python?

- a) Initialises the class for use.
- b) This function is called, when the new object is instantiated**
- c) Initialises all the data attributes to zero when called
- d) None of the above.

Q15. What is the output of the code?

```
1. class Point:
2.     def __init__(self, x = 0, y = 0):
3.         self.x = x+1
4.         self.y = y+1
5.
6. p1 = Point()
7. print(p1.x, p1.y)
```

- a) 0 0
- b) 1 1
- c) None None
- d) x y

Q16. Which of the following code used the inheritance feature?

a)

```
1. Class Foo:
   Pass
```

b)

```
1. class Foo(object):
2.     pass
```

```
3. class
   Foo(object): pass
```

c)

1. `class Foo:`
2. `pass`
  
3. `class`  
`Hoo(Foo): pass`

d) None of the above code.

Q17 If you a class is derived from two different classes, it's called

---

- a. Multilevel inheritance
  - b. Multiple Inheritance**
  - c. Hierarchical Inheritance
- 
- a.** Python Inheritance
